

# CONTROL

## November—Special Issue on Security

This entire issue will be devoted to critical infrastructure protection for process operations. We've brought together the entire *Control* team to cover every aspect of this important issue.

- Editor in Chief Walt Boyes and cybersecurity expert and “Unfettered” blog author Joe Weiss untangle some of the tough knots in the cybersecurity tangle.
- Executive Editor Jim Montague covers the “war” between enterprise and plant IT security and how to turn the conflict into a win-win for everyone.
- Contributing Editor Rich Merritt looks at physical security inside and outside the plant. How we've moved past junk yard dogs and barbed wire to RFID, radar, video and more.
- Control system guru Béla Lipták talks control security in nuclear plants.
- Fieldbus specialist John Rezabek tackles security in the field
- Technical editor Dan Hebert asks whether integrated safety and security systems really work.

This is a can't-miss issue. Look for it online or in print.
